The GENERA PAM Tool

PAM

- Find indicators to specify targets and to monitor change

- Address gender imbalances in decision making processes

- Gender equality in decision making bodies and positions

The following indicators can be relevant to find out if men and women are equally present in **decision** making bodies and positions or to what extent women are underrepresented.

Indicator	Value	Description & Use	Source
Men and women in leadership positions (see also Target 1.2)	Number by sex Proportion (%) by sex	Please choose those levels of decision making / leadership that exist in your institution and fill in the number of men and women holding those positions. Examples for leadership positions: Rector and Vice-Rectors, Heads of Institution Senate Members Heads of Departments, Deans Heads of Institutes Heads of Research groups	EFFORTI D3.3 ¹⁾ , JR ²⁾

Indicator	Value	Description & Use	Source
		This indicator measures the representation of both genders in boards or committees. As a first step powerful committees in the organization/department should be identified. Then the status quo of (equal) representation of men and	
	Number of	women in those committees should be identified. In universities data should include promotion and tenure-track committees. "Equal gender representation in decision-making	
Composition of boards or committees	members by sex	groups like boards or committees is considered crucial to enable a change in practice; as gatekeepers they possess the influence to enforce or hinder the development of equal gender opportunities. The composition can also be an indicator for the permeation of gender equality policies (Munir et al., 2013 ³⁾ , 104; Frehill et al. 2005, 13 ⁴⁾)." [EFFORTI D3.3 ⁵⁾]	EFFORTI D3.3 ⁶⁾ ; see also Toolkit ⁷⁾ , Athena SWAN ⁸⁾
		Equal representation of men and women in decision-making groups like boards and committees is seen as crucial to enable a change in practice. More women in boards and committees mean a higher share of women in decision making positions. However, a gender-balanced composition of boards does not necessarily lead to a more gender equality-oriented decision making as this also requires gender awareness of male and female members.	
		This indicator measures the presence of women on boards such as scientific or R&D commissions, boards, councils, committees, foundations, academy assemblies and councils, which usually hold a large degree of decision-making power.	
Proportion of women on boards - members and leaders	% of female board members % of female board leaders	Definition of boards: Scientific boards: 'A publicly or privately managed and financed group of elected or appointed experts that exists to implement scientific policy by, amongst other things, directing the research agenda, resource allocation and management within scientific research.' (She figures 2015, p. 206) Administrative/advisory boards: 'A publicly or privately managed and financed group of elected or appointed experts that exists to support the research agenda in a non-executive function by, amongst other things, administering research activities, consulting and coordinating different actors and taking a general advisory role.' (She figures 2015, p. 209)	She figures ⁹⁾
